

Odds and Ends

Height Fields
Slope
Walking

Height Field

- Simulate natural terrain
- An image controls terrain creation
- Simple base geometry
- Brighter → higher

Height Field

color	height
	1.00
	0.75
	0.50
	0.25
	0.00

POV-Ray height field

- One unit wide by one unit long square with a mountainous surface on top.
- The **height** of the mountain at each point is taken from the **color number** or the **brightness** in a graphic image file.

POV-Ray particulars

- The maximum height is one.
- You have to scale it.

Height Field

```
height_field{
  [HF_TYPE]
  "filename"
  [HF_MODIFIER...]
  [OBJECT_MODIFIER...]
}
HF_TYPE:
  gif | tga | pot | png | pgm | ppm | jpeg | tiff |
  sys
HF_MODIFIER:
  hierarchy [Boolean] | smooth | water_level Level
```

Height Field

Height Field

- The un-scaled height field size will always be 1 by 1.
- Higher resolution → smaller triangles

Example

Example

```
height_field(  
  tga "MountLol.tga"  
  translate<-0.5,0,-0.5>  
  scale<50,7,50>  
  texture{  
    pigment{color rgb <0.85,0.6,0.4>}  
    normal {bumps 0.75 scale 0.025 }  
    finish {ambient 0.1 diffuse 0.8 }  
  }  
)
```

How to get an image?

- Paint one
- Use application software to create one
- Use procedural texture

“baking” a texture

converting a procedural texture to an image

- costs memory – usually large file size
- saves computation in the long run
- use
 - orthographic camera
 - only ambient coloring
 - perspective and light interaction will come later
 - high quality settings
 - image size
 - color representation
 - anti-aliasing

baking in POV-Ray

- see heightFieldCreate.pov
- global settings – 16 bit grayscale

```
global_settings {  
  //assumed_gamma 2.2  
  hf_gray_16  
}
```

- add render setting for increased accuracy

```
[1024x1024, aa 0.1]  
+FT  
Width=1024  
Height=1024  
Antialias=On  
Antialias_Threshold=0.1
```

- or even higher, 2048x2048
- note: high frequency or quick changes will look BAD if you are close!
 - may need to use more than one heightfield

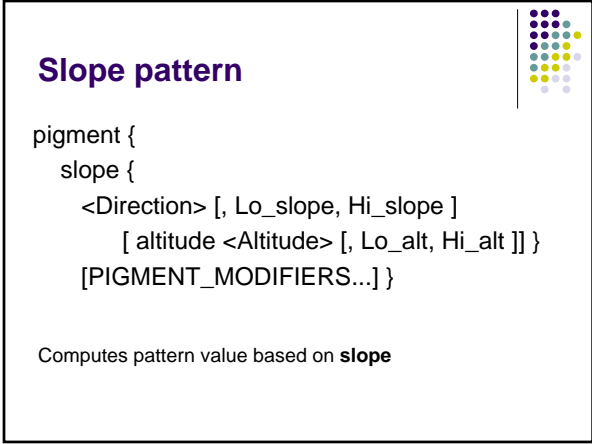

heightfield

Eric Sedgwick

Slope pattern

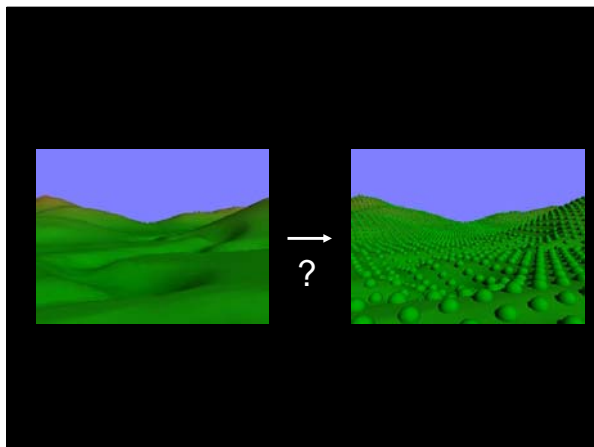

```
pigment {  
  slope {  
    <direction>  
    [PIGMENT_MODIFIERS...]  
  }  
}
```

surface normal opposite direction of <direction> : slope = 0.0
surface normal perpendicular to <direction> : slope = 0.5
surface normal parallel to <direction> : slope = 1.0.

Slope pattern

```
texture {  
  pigment {  
    slope { y altitude .65*y }  
    pigment_map {  
      [.573 Clear]  
      [.58 White]  
    }  
  }  
}
```

Leveler

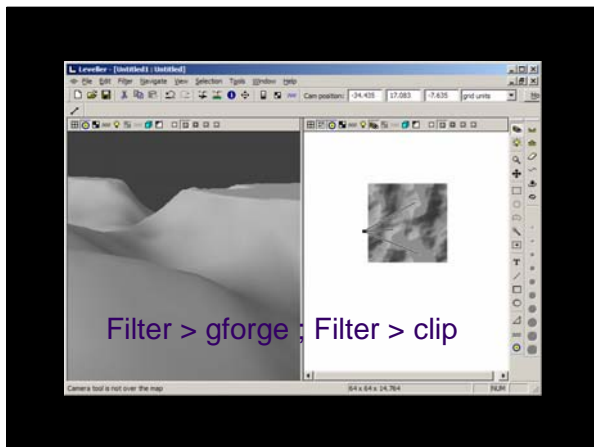

- Wysiwyg interface for terrain creation
- Export POV, positions
- www.daylongraphics.com

Process

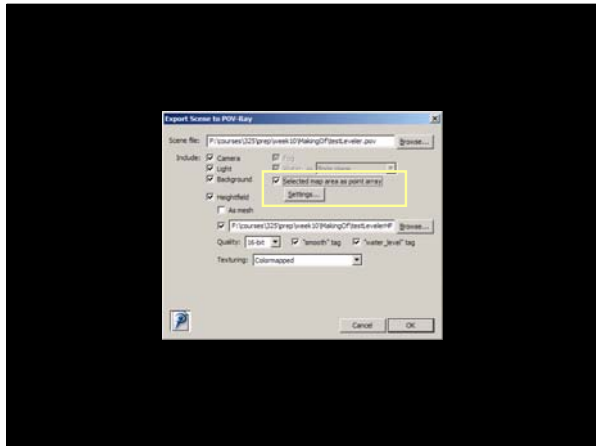

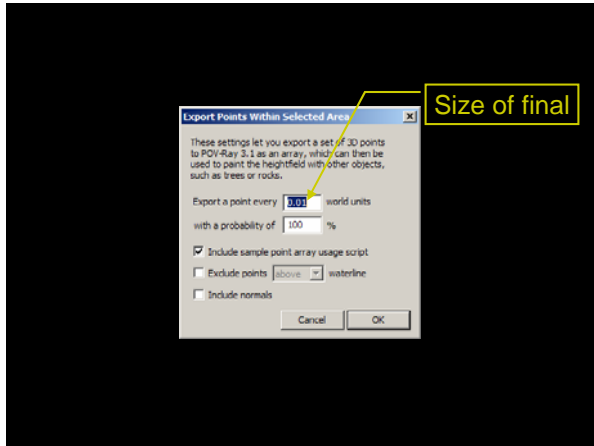

- Create terrain
- Select areas
- Export POV-Ray points

Size of final

```
#declare HF_pts = 2384;
#declare HF_pts_array = array[HF_pts]
{
    <-31.5,12.216,25.5>,
    <-31.5,12.51,24.75>,
    <-31.5,12.595,24>, ...
}
#declare N = 0;
#while(N < HF_pts)
    sphere { < 0, 0, 0 > 0.2
        pigment { Green }
        translate HF_pts_array[N]
    }
    #declare N = N + 1;
#end
```

Walk cycle in POV

- Theresa Willis <http://www.jbarchuk.com/twillis>
- Specifies human proportions
- Declare key motion parameters
- Specifies type of motion
- Declare a figure

Proportions

```
#declare HeadRho = .130 ;
#declare NeckRho = .066 ;
#declare TrunkRho = .306 ;
#declare lClavicleRho = .125 ;
#declare rClavicleRho = .125 ;
#declare lArmRho = .18 ;
#declare rArmRho = .18 ;
#declare lHandRho = .054 ;
#declare rHandRho = .054 ;
#declare lFingerRho = .054 ;
#declare rFingerRho = .054 ;
...
```

Declare parameters

1. steps

2. StridePhi

Declare parameters

3. LegSwingPhi

Specifies motion

- walking.inc
- standing.inc
- sitting.inc

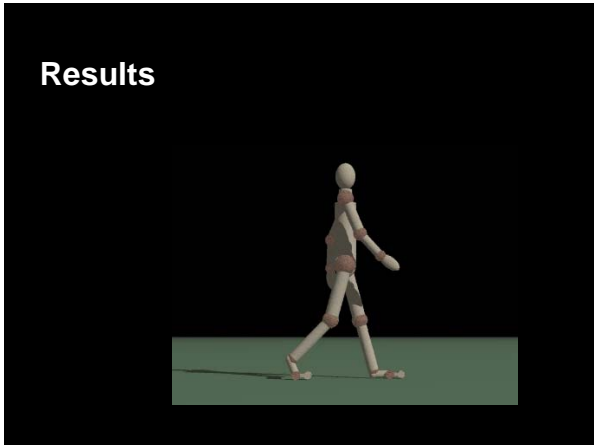

Create figure

lBall	Ball of left foot
lHeel	Left Heel
lAnkle	Left Ankle
lKnee	Left Knee
lHip	Left Hip
Center	Center of Pelvis
rBall	Ball of right foot
rHeel	Right Heel
rAnkle	Right Ankle
rKnee	Right Knee
